

Plastic Fabricators (WA) Pty Ltd

Specialised Plastic Fabrication for Commerce and Industry

Plastic Fabricators (WA) has operated a specialised plastic fabrication business out of Perth, Western Australia since 1981. Over this time we have established an enviable reputation as one of Australia's leading manufacturers of premium quality fabricated plastic products for the mining and mineral processing, chemical and water treatment industries. Although we can accommodate virtually any customer requirement, typical materials of construction include polypropylene, polyethylene, PVDF, PFA, FEP, CPVC & PVC.

The benefits of modern industrial plastics include superior corrosion and abrasion resistance, chemical resistance, light weight, excellent strength and temperature characteristics, ease of formability and fabrication and relatively low cost. As a result, plastics are increasingly becoming the material of choice for both designers and maintenance engineers.

Whether you require equipment for a new project, re-engineering of corroded metal equipment or piping, a site repair or an installation service, we can provide you the materials, resources and expertise to solve your problems.

Tanks, Process Equipment & Pressure Vessels

- Plastic lined FRP tanks and vessels
- Plastic chemical tanks
- Bunds
- Scrubbers

The superior corrosion resistance and environmental performance of modern industrial plastics makes them the ideal choice for applications such as chemical storage and water treatment facilities. At Plastic Fabricators (WA) we can manufacture atmospheric storage and pressure equipment to suit your needs.

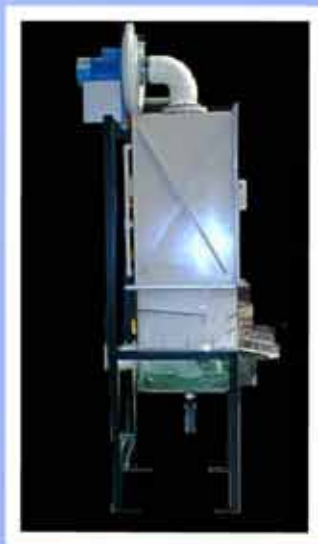

Whether your application requires dished ends to be formed, PTFE lining or any other specialty requirement, we have the equipment and trained personnel to manufacture or modify your product.

Specialty Fabrications

- Chemical treatment packages
- Equipment covers & enclosures
- Equipment guards
- Wear plates
- Process equipment
- Prototype fabrication
- Plastic machining

The optimum plastic material for a given application may be selected from a consideration of properties such as extremely high abrasion or impact resistance, UV resistance, corrosion or chemical resistance and service temperatures of up to 260 degrees Celsius.

With the relative ease of formability and fabrication, the range of potential specialty products that can be fabricated at Plastic Fabricators (WA) is limited only by your imagination.

Piping & Ducting

- Butt fusion pipe spools
- Reticulation for labs & process plants
- Ducting and chute lining
- Custom fittings

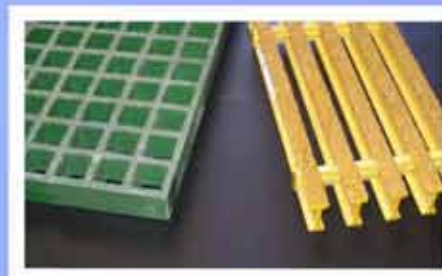

Whether your application requires site installation of chemical resistant process or laboratory piping, the fabrication of specialised flow fittings or of wear plates requiring outstanding abrasion resistance, at Plastic Fabricators (WA) we can help you to achieve your objectives with a minimum of fuss.

FRP Products & Plastic Fittings

- FRP pultruded and moulded grating
- FRP cable ladder
- Plastic bolts & nuts

FRP grating and cable ladder provide superior corrosion resistance and strength to weight ratios over conventional materials. We can supply grating to your needs and we fabricate cable ladder to any size or shape. We also manufacture and stock a range of polypropylene, nylon, PVDF and PVC bolts, nuts and washers which are ideal for bolted connections in highly aggressive environments.
